

Time Allotted : 3 Hours
Full Marks : 70

The figures in the margin indicate full marks.
Candidates are required to give their answers in their own words as far as practicable.

## GROUP - A <br> ( Multiple Choice Type Guestions )

1. Choose the correct alternatives for any ten of the following :

$$
10 \times 1=10
$$

i) The process of using sample statistics to draw conclusions about true population parameters is called
a) statistical inference
b) the scientific method
c) sampling
d) descriptive statistics.
ii) Probability of having least one 'six' from 3 throws of an unbiased die is
a) $\left(\frac{5}{6}\right)^{3}$
b) $\quad 1-\left(\frac{5}{6}\right)^{3}$
c) $\frac{1}{6^{3}}$
d) none of these.

CS / MBA(New)/SEM-2 (FT \& PT)/MB-203/2011

iii) Let $X \sim N\left(\mu, \sigma^{2}\right)$, then $P(\mu-3 \sigma \leq X \leq m 43 \sigma)$ is equal to

a) $0 \cdot 6827$
b) 0.9545
c) 0.9973
d) none of these.
iv) Let $T_{n}$ be a statistic to estimate the population parameter $\theta$. Also let $E\left(T_{n}\right)=\theta+5$, then $T$ is
a) unbiased
b) biased
c) efficient
d) none of these.
v) Type-I error can be ralated as
a) cousumer's risk
b) producer's risk
c) manager's risk
d) none of these.
vi) $\operatorname{Cov}(X, Y)=0$ implies
a) $X$ and $Y$ are independent
b) $\quad X$ and $Y$ are dependent
c) there is no linear relationship between $X \& Y$
d) none of these.
vii) For a t-distribution, as degree of freedom increases, the distribution approaches to
a) Binomial distribution
b) Normal distribution
c) Poisson distribution
d) None of these.
viii) The following sample of weights is drawn from a normal population : 45, 48, 49.5, 46.5, 47, 46, 45.5 and 50. Then, the unbiased estimator of population mean will be
a) 47.1 b$)$
377.5
c) 50
d) cannot be determined.
ix) To test goodness of fit for a non-normal population, we use
a) Kolmogorov-Smirnov Test
b) Kruskal-Wallis test
c) Sign test
d) $\chi^{2}$ test.
x) The values of test statistic which leads to the rejection of null hypotheses is called
a) confidence level
b) $p$-value
c) critical region
d) level of significane.

CS / MBA(New)/SEM-2 (FT \& PT)/MB-203/2011

xi) The standard deviation of the sampling distribution of a statistic is referred to as
a) standard error
b) sampling error
c) mean error
d) none of these.
xii) Which of the following components is used for shortterm forecast?
a) Cyclical
b) Trend
c) Seasonal
d) None of these.

## GROUP - B

## (Short Answer Type Questions )

Answer any three of the following. $3 \times 5=15$
2. The mean yield for one acre plot is 662 kilos with standard deviation 32 kilos. Assuming normal distribution, how many one-acre plots in a batch of 1000 plots would you expect to have yielded
(i) over 700 kilos ?
(ii) below 650 kilos?
(iii) What is the lowest yield of the best 100 plots ?

$$
\begin{aligned}
& {[p(0 \leq Z \leq 0 \cdot 38)=0 \cdot 1480 \text { and if, }} \\
& \left.p\left(0 \leq Z \leq z_{1}\right)=0 \cdot 4 \quad z_{1}=1.28\right]
\end{aligned}
$$

3. Fit a linear trend equation to the following series on production data :

| Year | 1961 | 1962 | 1963 | 1964 | 1965 | 1966 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Production(tons) | 21 | 37 | 48 | 56 | 62 | 69 |

Also estimate the production in the year of 1970.
4. The scores under two conditions $X$ and $Y$ obtained by the respondents are given below :

| $\boldsymbol{X}$ | 12 | 16 | 8 | 6 | 4 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\boldsymbol{Y}$ | 7 | 12 | 17 | 5 | 12 | 11 |

Apply the sign test and comment on your findings at 0.05 level of significance.
5. Write a short note on Factor Analysis.
6. The mean life time of a sample of 100 fluorescent tubelights produced by a company is computed to be 1570 hrs with s.d. of 120 hrs . The company claims that the average life of the tubes produced by the company is 1600 hrs . Using the level of significance of 0.05 is the claim acceptable?
( Given $|z|$ at $5 \%$ level $=1.96$ ).
7. Discuss the difference between parametric and nonparametric tests.

> GROUP - C
( Long Answer Type Questions )
Answer any three of the following.
$3 \times 15=45$
8. The following table shows the lives in hours of four batches of electric lamps :
Batches

| 1. | 1600 | 1610 | 1650 | 1680 | 1700 | 1720 | 1800 | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2. | 1580 | 1640 | 1640 | 1700 | 1750 | - | - | - |
| 3. | 1460 | 1550 | 1600 | 1620 | 1640 | 1660 | 1740 | 1820 |
| 4. | 1510 | 1520 | 1530 | 1570 | 1600 | 1680 | - | - |

Perform an analysis of variance of these one way classified data and show that a significance test does not reject their homogeneity.

CS / MBA(New)/SEM-2 (FT \& PT)/MB-203/2011
9. a) If ' $T$ ' is an unbiased estimator for $\theta$, show theat $T^{2}$ is biased estimator for $\theta^{2}$.
b) Show that $\frac{\left[\sum x_{i}\left(\sum x_{i}-1\right)\right]}{n(n-1)}$ is an unbiased estimate of $\theta^{2}$, for the sample $x_{1}, x_{2}, \ldots, x_{n}$ drawn on $X$ which takes the values 1 or 0 with respective probabilities $\theta$ and ( $1-\theta$ ).
c) Given $x_{1}, x_{2}, \ldots, x_{n}$ is a random sample from a normal population $N(\mu, 1)$. Show that $t=\frac{1}{n} \quad \sum_{i}^{n} x_{i}^{2} \quad$ is $i=1$ an unbiased estimator of $\mu^{2}+1$.
10. a) Make a sign test for the following paired sample data and comment on the difference between the hindleg lenth and foreleg lenth of deers.

| Deer | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hindleg <br> (cm) | 142 | 140 | 144 | 144 | 142 | 146 | 149 | 150 | 142 | 148 |
| Foreleg <br> $(\mathrm{cm})$ | 138 | 136 | 147 | 139 | 143 | 141 | 143 | 145 | 136 | 146 |

b) A company believes that it hold about $30 \%$ share of the colour TV makret in a city. The company wishes to get a precise estimate of its share within a margin of error of $2 \%$. How large a number of households should be surveyed to get the desired estimate with a confidence of $95 \%$ ? If the cost of contacting a household is Rs. 20, what will be total cost of the survey ? If the budget for this survey is limited to Rs. 10,000, what accuracy can be obtained by a survey within this budget?
11. a) Explain briefly the additive and multiplicative models of time series. Which of these models is more popular in practice and why?
b) Assume a 4 -year cycle and calculate the trend by the method of moving average from the following data :

| Year | 1991 | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Production <br> (million lbs) | 464 | 515 | 518 | 467 | 502 | 540 | 557 | 571 | 586 | 612 |

12. a) Define critical region, Errors of Type-I \& Type-II and power of a test.
b) Let $W=\{x: x \geq 1\}$ is the critical region for testing the Hypothesis

$$
\begin{aligned}
& H_{0}: \theta=1 \\
& H_{1}: \theta=2
\end{aligned}
$$

on the basic of a single observation from the population $f(x, \theta)=\theta e^{-\theta \mathrm{x}}, x \geq 0$.

Calculate type-I error, type-II error and power of the test. 5
c) Obtain $95 \%$ confidence interval for the population parameter $\lambda$ of the Poisson distribution

$$
\begin{equation*}
f(x, \lambda)=\frac{e^{-\lambda} \lambda^{x}}{\underline{x}} . \tag{6}
\end{equation*}
$$
