PETROLEUM REFINERY ENGINEERING

Time Allotted: 3 Hours Full Marks: 70

The figures in the margin indicate full marks.

Candidates are required to give their answers in their own words as far as practicable.

Answer any *five* questions. $5 \times 14 = 70$

- 1. a) Write the characteristics of crude oil composition.
 - b) What is the motivation behind the shifting of focuses from oil to gas?
 - c) Write a short note on crude oil treatment and storage.

3 + 3 + 8

- 2. a) Draw the sketch of CDU and VDU with all accessories and also discuss the merits and demerits of different reflex arrangement in CDU.
 - b) Compare between fixed bed reactor and moving bed reactor.
 - c) Write the important factors for catalyst selection.

8 + 3 + 3

200091 [Turn over

- 3 a) How many techniques you may suggest to minimize the catalysts deactivation?
 - b) What are the adverse conditions may arise due to catalyst deactivation?
 - c) Write the process parameters which significantly influence catalyst deactivation. 5 + 5 + 4
- 4. a) Write the objective of fluid coking operation along with process flow-sheet.
 - b) Write a short note on soaker type visbreaking operation.
 - c) What is the objective of reforming process?
 - d) Why is the reforming process getting importance in modern refinery? 5 + 4 + 2 + 3
- 5 a) Design a process flow-sheet of FCC unit based on process requirement.
 - b) Construct a comparative presentation of coking, catalytic cracking, visbreaking, hydrovisbreaking, hydrocracking and hydrotreating in a temperature (°C) vs pressure (bar) plot based on their process conditions. 8 + 6
- 6. Write a short note on the following:
 - a) Sintering of catalyst
 - b) Hydroprocessing
 - c) Cetane number.

5 + 5 + 4

- 7. a) Write the definition of fire point, flash point, aniline point, smoke point, pour point, cloud point, grease point and viscosity index.
 - b) Why are cetane number and octane number important for diesel oil and petroleum respectively. 8 + 6

200091

- 8. a) Why diesel and petrol car gives maximum mileage between 40 to 60 km/hr speed?
 - b) Why are API gravity and Viscosity index important parameter for liquid oil instead of specific gravity and viscosity?
 - c) What are the precautions should take during liquid oil storage and transportation?
 - d) 'A oil sample shows very high aniline point.' What does it mean? 5 + 3 + 3 + 3
