**2012**

**HEAT TRANSFER**

Time Allotted : 3 Hours

Full Marks : 70

*The figures in the margin indicate full marks.*

*Candidates are required to give their answers in their own words  
as far as practicable.*

**GROUP – A**

**( Multiple Choice Type Questions )**

1. Choose the correct alternatives for the following :  $10 \times 1 = 10$

- i) Up to the critical radius of insulation
  - a) added insulation will increase heat loss
  - b) added insulation will decrease heat loss
  - c) convection heat loss will be less than conduction heat flux
  - d) heat flux will decrease.
- ii) According to reciprocity theorem
  - a)  $A_1 F_{12} = A_2 F_{21}$
  - b)  $A_2 F_{12} = A_1 F_{21}$
  - c)  $A_1 F_{21} = A_2 F_{12}$
  - d) all of these.

5136(N)

[ Turn over

- 5136(N)

vii) A surface for which emissivity is constant at all temperatures and throughout the entire range of wavelength is called

- a) opaque                                      b) gray
- c) specular                                    d) diathermanous.

viii) For flow over a flat plat  $Pr > 1$ , the thermal boundary layer for laminar forced convection

- a) is thinner than the hydrodynamic boundary layer
- b) has a thickness equal to zero
- c) is of same thickness as hydrodynamic boundary layer
- d) is thicker than the hydrodynamic boundary layer.

ix) Consider two infinitely long black body concentric cylinder with diameter ratio  $\frac{D_2}{D_1} = 3$ . The shape factor for the outer cylinder with itself will be

- a) 0    b)  $\frac{1}{3}$
- c)  $\frac{2}{3}$     d) 1.

x) For steady heat flow, constant thermal conductivity and in absence of heat generation the temperature distribution for plane wall is

- a) parabolic
- b) hyperbolic
- c) cubic
- d) linear.

### GROUP – B

#### ( Short Answer Type Questions )

Answer any *three* of the following  $3 \times 5 = 15$

2. What is critical thickness of insulation ? Derive critical radius of insulation in case of sphere.  $1 + 4$
3. Define and explain the *two* of the following :  $2 \times 2\frac{1}{2}$ 
  - a) Reynolds number
  - b) Eckert number
  - c) Weber number.
4. What is the significance of Biot number of Fourier number ?
5. A plane wall (thermal conductivity =  $10.2 \text{ W/m } ^\circ\text{C}$ ) for 100 mm thickness and area  $3 \text{ m}^2$  has steady surface temperature of  $170^\circ\text{C}$  and  $100^\circ\text{C}$ . Determine
  - i) the rate of heat flow across the plane wall
  - ii) the temperature gradient in the flow direction.
6. Show from energy balance consideration that the radiation heat transfer from a plane composite surface area  $A_4$  and made up of plane surface areas  $A_2$  and  $A_3$  to a plane surface area  $A_1$  is given by  $A_4 F_{41} = A_3 F_{31} + A_2 F_{21}$  and  $F_{14} = F_{12} + F_{13}$ .

**GROUP – C**

**( Long Answer Type Questions )**

Answer any *three* of the following.  $3 \times 15 = 45$

7. a) Derive the general heat conduction equation in Cartesian coordinates. Under what condition does this get reduce to Poisson equation, Laplace equation and Fourier equation ?
- b) The inner surface  $r = a$  and the outer surface at  $r = b$  of a cylinder ( length of cylinder =  $L$  ) are maintained at uniform temperature  $T_1$  and  $T_2$  respectively. The thermal conductivity  $K$  of the solid is constant.
  - i) Develop an expression for the 1-dimensional, steady state temperature distribution  $T ( r )$  in the cylinder
  - ii) Develop an expression for the radial heat flow rate  $Q$  through the cylinder
  - iii) Develop an expression for the thermal resistance of the cylinder. ( 6 + 3 ) + 6
8. a) Using lumped parameter analysis method derive the following relation with usual notations :

$$\frac{t - t_a}{t_1 - t_a} = e^{-Bi \times Fo}$$

- b) An egg with mean diameter of 40 mm and initially at 20°C is placed in a boiling water pan for 4 minutes and found to be boiled to the consumer taste. For how long should a similar egg for same consumer be boiled when taken from a refrigerator at 5°C ? Take the following properties for egg :

$k = 10 \text{ W/m}^\circ\text{C}$ ,  $\rho = 1200 \text{ kg/m}^3$ ,  $c = 2 \text{ kJ/kg}^\circ\text{C}$  and  $h$  (heat transfer coefficient) = 100 W/m<sup>2</sup>°C. Use lump theory. 7 + 8

9. a) What is Couette flow ? Deduce an expression for temperature distribution when the upper and lower plates are different.

b) Given  $Nu_x = \frac{h(x)x}{k} = 0.332 \text{Pr}^{\frac{1}{3}} \text{Re}_x^{\frac{1}{2}}$

Develop a relation average  $h(x)$  for  $0 \leq x \leq L$

Atmospheric air at  $T_\infty = 400 \text{ K}$  with a velocity  $u_\infty = 1.5 \text{ m/s}$  flows over a flat plate  $L = 2 \text{ cm}$  long maintained at a uniform temperature  $T_w = 300 \text{ K}$ .

Calculate average  $h(x)$  that is  $h_m$  for  $0 \leq x \leq L$ .

Calculate the heat transfer rate for width  $w = 0.5 \text{ m}$ .

Thermodynamic properties of air at 350 K

$\rho$ (kg/m <sup>3</sup> )	$C_p$ (kJ/kgK)	$\mu \times 10^7$ (Ns/m <sup>2</sup> )	$\nu \times 10^6$ (m <sup>2</sup> /s)	$k \times 10^3$ (W/mK)	$\alpha \times 10^6$ (m <sup>2</sup> /s)	$\text{Pr}$
0.9950	1.009	208.2	20.92	30	29.9	0.700

8 + 7

10. a) Show that the emissive power of a black body is  $\pi$  times the intensity of emitted radiation.
- b) By using one radiation shield between two surfaces and if all the three surfaces have the same emissivity, show that the net radiant heat transfer is reducing by 50%.
- c) Consider two large parallel plates one at  $t_1 = 727^\circ\text{C}$  with emissivity  $\varepsilon_1 = 0.8$  and other at  $t_2 = 227^\circ\text{C}$  with emissivity  $\varepsilon_2 = 0.4$ . An aluminium radiation shield with an emissivity,  $\varepsilon_3 = 0.05$  on both sides is placed between the plates. Calculate the percentage reduction in heat transfer rate between the two plates as a result of the shield. Use  $\sigma = 5.67 \times 10^{-8} \text{ W/m}^2\text{K}^4$ .
