**CS/B.TECH (CSE)/SEM-7/CS-701/2009-10**  
**2009**

**LANGUAGE PROCESSOR**

Time Allotted : 3 Hours

Full Marks : 70

*The figures in the margin indicate full marks.*

*Candidates are required to give their answers in their own words  
as far as practicable,*

**GROUP - A**

**( Multiple Choice Type Questions )**

1. Choose the correct alternatives for the following :

$$10 \times 1 = 10$$

- i) The regular expression  $(a | b) * abb$  denotes
  - a) all possible combinations of  $a$ 's and  $b$ 's
  - b) set of all strings ending with  $abb$
  - c) set of all strings starting with  $a$  and ending with  $abb$
  - d) none of these.
- ii) An inherited attributes is the one whose initial value at a parse tree node is defined in terms of
  - a) attributes at the parent and/or siblings of that node
  - b) attributes at children nodes only
  - c) attributes at both children nodes and parent and/or siblings of that node
  - d) none of these.

77301

[ Turn over

CS/B.TECH (CSE)/SEM-7/CS-701/2009-10

- iii) The intersection of a regular language and a context free language is
- always a regular language
  - always a context free language
  - always a context sensitive language
  - none of these.
- iv) If  $I$  is a set of valid items for a viable prefix  $\gamma$ , then  $GOTO(I, X)$  is a set of items that are valid for the viable prefix :
- $\gamma X$
  - $\gamma$
  - prefix of  $\gamma$
  - none of these.
- v) Shift-reduce parsers are
- top-down parsers
  - bottom-up parsers
  - may be top-down or bottom-up parsers
  - none of these.
- vi) In a programming language, an identifier is permitted to be a letter followed by any number of letters or digits. If  $L$  and  $D$  denote the set of letters and digits respectively, which of the following expressions defines an identifier ?
- $(LUD)^+$
  - $L.(LUD)^*$
  - $(L.D)^*$
  - $L.(L.D)^*$

$$S \rightarrow aS \mid bS \mid a \mid b$$

a)  $a + b$                       b)  $(a + b)^*$   
c)  $(a + b)(a + b)^*$         d)  $(aa + bb)a^*$

- a) Induction variable elimination
- b) Loop jamming
- c) Loop unrolling
- d) Loop heading.

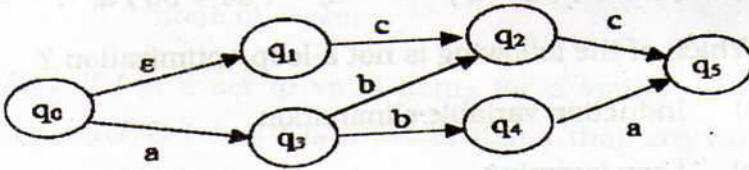

- a) It increases the cost of execution
- b) Type checking is done during the execution
- c) All the type errors are detected
- d) None of these.

- a) with values of only some attributes shown at parse tree nodes
- b) with attribute values shown at the parse tree node
- c) without attribute values shown at the parse tree nodes
- d) with grammar symbols shown at the parse tree nodes.

**GROUP - B****( Short Answer Type Questions )**

Answer any three of the following.  $3 \times 5 = 15$

2. Convert the non-deterministic FA below to its equivalent DFA.

3. Consider the following lexically nested C code :

```

int a, b ;
int foo() { int a, c ; }
int bar() { int a, d ; /* HERE */ }
  
```

- How can symbol tables represent the state of each scope at the point marked HERE ? Draw a diagram.
- What symbols are visible/not visible at point HERE ?

$3 + 2$

4. Consider the context-free grammar

$$S \rightarrow SS + \mid SS * \mid a$$

- Show how the string  $aa + a *$  can be generated by this grammar.
- Construct a parse tree for this string.
- What language does this grammar generate ? Justify your answer.

$2 + 1 + 2$

5. a) How does Lexical Analyzer help in the process of compilation ? Explain it with an example.

b) Consider the following conditional statement :

if (  $x > 3$  ) then  $y = 5$  else  $y = 10$  ;

From the above statement how many tokens are possible and what are that ? 3 + 2

6. What is look ahead operator ? Give an example. With the help of the look ahead concept show how identifiers can be distinguished from keywords. 1 + 1 + 3

### GROUP - C

#### ( Long Answer Type Questions )

Answer any *three* of the following.  $3 \times 15 = 45$

7. a) Explain the different phases of a compiler, showing the output of each phase, using the example of the following statement :

position : = initial + rate \* 60

b) Compare compiler and interpreter. 10 + 5

8. a) Construct SLR parsing table for the following grammar :

$S \rightarrow AS \mid b$

$A \rightarrow SA \mid a$

b) What is an operator grammar ? Give an example.

12 + 3

CS/B.TECH (CSE)/SEM-7/CS-701/2009-10

9. a) Translate the following expression :

$$a = b * - c + b * - c$$

into

i) Quadruples

ii) Triples

iii) Indirect Triples.

b) What are the differences among Quadruples, Triples and Indirect Triples ?

c) Generate machine code for the following instruction :

$$v = a + ( b * c ) - d.$$

$$( 3 + 3 + 3 ) + 3 + 3$$

10. a) Construct the DAG for the following basic block :

$$d := b * c$$

$$e := a + b$$

$$b := b * c$$

$$a := e - d$$

b) What is peephole optimization ?

c) Consider some interblock code optimization without any data flow analysis by treating each extended basic block as if it is a basic block. Give algorithms to do the following optimizations within an extended basic block. In each case, indicate what effect on other extended basic blocks a change within one extended basic block can have.

i) Common sub-expression elimination

ii) Constant folding

iii) Copy propagation.

$$4 + 3 + 8$$

11. Write short notes on any *three* of the following :  $3 \times 5$

- a) Loop optimization
  - b) Dependency graph
  - c) Input buffering
  - d) YACC
  - e) Symbol Table
  - f) L-attributed definitions
  - g) LEX.
-
