

CS/M.Tech (IT)/SEM-3/PGIT-302A/2012-13

## 2012

## ADVANCED IMAGING TECHNOLOGY

Time Allotted: 3 Hours
Full Marks : 70

The figures in the margin indicate full marks.
Candidates are required to give their answers in their own words as far as practicable.

## GROUP - A

## ( Short Answer Type Questions )

1. Answer any five of the following.
a) What would be the effect on the histogram for the following 4 bit gray scale image segment if we set to zero in first two bit planes ?

| 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: |
| 4 | 5 | 6 | 7 |
| 8 | 9 | 10 | 11 |
| 12 | 13 | 14 | 15 |

b) Define unsharp masking and high boost filtering techniques of an image in spatial domain.
c) Determine Discrete Fourier transformation of the following image segment :

| 0 | 1 | 2 | 1 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 2 |
| 2 | 3 | 4 | 3 |
| 1 | 2 | 3 | 2 |

d) What is meant by image enhancement by mask processing ? Discuss any one method in it.
e) Define digital image model mathematically. What is the difference between sampling and quantization ?
f) Define Fourier spectrum, phase angle and power spectrum of a digital image.
g) Show that subtracting the Laplacian from an image is proportional to unsharp masking.

## GROUP - B

## ( Long Answer Type Questions )

Answer any three of the following. $3 \times 15=45$
2. a) Define different types of adjacency between pixels.

Consider the following $6 \times 7$ binary image segment, some of the pixels being highlighted :

| 0 | 1 | 0 | 0 | $1(e)$ | 0 | $1(a)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 1 | 0 | 1 |
| 1 | 1 | 1 | 0 | 1 | 1 | 1 |
| 0 | 1 | 1 | $1(d)$ | 0 | 0 | 0 |
| 1 | 1 | $1(c)$ | 0 | 1 | 0 | 0 |
| $(b) 1$ | 1 | 1 | 0 | 0 | 0 | 1 |

Let $\boldsymbol{V}=\{1\}$ be the set of gray-level values used to define adjacency between pixels.
b) Determine whether the pixels $\mathbf{c}$ and $\mathbf{d}$ are 4 -adjacent, 8-adjacent and $m$-adjacent with explanationvomesmin
c) Find the 8 -adjacent and $m$-adjacent paths if exists between the pixels a and $\mathbf{b}$.
d) Find the city block $\left(\mathrm{D}_{4}\right)$ and chessboard $\left(\mathrm{D}_{8}\right)$ distances between the pixels a and $\mathbf{b}$.
e) Define connectivity between pixels. Determine whether the pixels $\mathbf{b}$ and $\mathbf{e}$ are connected or not. Explain why.

$$
3+3+4+2+3
$$

3. a) What is meant by image enhancement by point processing ? Discuss any two methods in it.
b) Perform histogram stretching so that the new image has a dynamic range of $[0,7]$ :

| Gray <br> level | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Number of <br> pixels | 0 | 20 | 30 | 40 | 30 | 10 | 20 | 0 |

c) Find the histogram equalized image of the following 3-bit image segment :

| 0 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 0 | 4 | 3 | 4 |
| 1 | 3 | 4 | 5 |
| 1 | 3 | 5 | 7 |
| 4 | 6 | 1 | 6 |

$$
4+5+6
$$

4. a) What is low-pass filter in frequency domain padiscuss any one low-pass filtering method in frequency domain.
b) Explain why the discrete histogram equalization techniques do not, in general, yield a flat histogram.
c) Suppose that a flat area with centre at $\left(x_{0}, y_{0}\right)$ is illuminated by a light source with intensity distribution

$$
i(x, y)=K e^{-\left[\left(x-x_{0}\right)^{2}+\left(y-y_{0}\right)^{2}\right]}
$$

Assume for simplicity that the reflectance of the area is constant and equal to 1.0 , and let $\mathrm{K}=255$. If the resulting image is digitized with $m$ bits of intensity resolution, and the eye can detect an abrupt change of eight shades of intensity between adjacent pixels, what value of $m$ will cause visible false contouring ? $4+5+6$
5. a) Write an algorithm for converting a gray scale image to binary.
b) What is sobel operator ? Explain with an example.
c) Derive the expression for image averaging. Discuss the effect of the following image by taking $3 \times 3$ window sizes :

| 3 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: |
| 4 | 4 | 3 | 4 |
| 10 | 3 | 20 | 5 |
| 1 | 3 | 5 | 7 |
| 4 | 6 | 1 | 6 |

$$
3+5+7
$$

6. a) Explain Euclidian distance, city block distance and chessboard distance with examples.
b) Derive the expression for Laplacian operator in 2-dimension. Also show that Laplacian is linear operator.
c) What do you mean by digital image processing ? Discuss the different application areas of digital image processing.
